

Zoss Water is expanding its portfolio of water solutions

We are excited to present our innovative solutions for solving critical water challenges.

Mumbai, Maharashtra Dec 27, 2022 (Issuewire.com) - Zoss Water is excited to announce the launch of its latest product line: under-the-sink alkaline ionized water machines popularly known as "Sydney", this product adds glitters to your kitchen aesthetics with its digital faucet and compact design. These innovative machines use a process called advanced computational electrolysis to split water molecules into alkaline and acid streams, resulting in water with a higher pH level that is believed and supported by scientific research papers to have numerous health benefits.

In addition to the current offerings of countertop and undersink alkaline ionized water appliances, Zoss Water is also introducing a new end-to-end wastewater treatment system for various industries such as residential complexes and large Industries. This new technology, known as "Zoss Nets" (Nano Effluent Treatment System) uses advanced electrocoagulation filtration and purification technology to remove contaminants and impurities from wastewater, making it safe to reuse or discharge back into the

environment.

"Zoss NETS" can help various industries save almost 40% on civil costs and 30% on operational and maintenance costs, these are purely plug-and-play systems with a modular design to save space and treat wastewater efficiently and profitably.

Moreover, after the feedback received from existing clients and growing challenges with household water quality, Zoss Water will launch a comprehensive range of household filtration systems in 2023 designed to improve the quality of tap water for all purposes. These systems use a variety of technologies, including salt-free water softeners, activated carbon filters, and reverse osmosis, to remove contaminants and improve the taste and clarity of tap water.

Zoss Water is committed to providing high-quality, environmentally friendly products that improve the lives of its customers. The launch of these new products is just the latest example of this commitment, and the company looks forward to continuing to innovate and bring new solutions to the Indian and international markets in the future.

This company is currently under incubation at the center for incubation and business acceleration at Vashi, Navi Mumbai, and was also a part of the pre-incubation program at NSRCEL, IIM Bangalore.
