# CubexSoft Tools Introducing a Powerful Data Wipe Software

**With CubexSoft Data Wipe Tool, users may securely protect data privacy at the end of the device lifespan by permanently erasing data from a variety of storage drives and devices.**

**New Delhi, Delhi Jan 2, 2023 (**Issuewire.com**)** - CubexSoft, a leader in data recovery, data erasure, and data migration solutions, today released by CubexSoft Tools Pvt. Ltd., a straightforward yet incredibly effective data erasure and diagnostic tool that lets users completely wipe clean any data from storage devices. In order to protect data privacy at the conclusion of the storage device lifecycle, the technology ensures permanent data erasing from hard drives, SSDs, PCs, laptops, Macs, servers, and mobile devices.

*"Users frequently try to clean their devices using built-in ways before selling, returning, or disposing of outdated devices. According to Aarohi Dutta, CEO of CubexSoft, "Data Wipe" mitigates this risk through rigorously tested failsafe media wiping and traceable reporting that completely destroys data,*

*leaving no chance of recovery. However, this doesn't completely erase all traces of data, leaving potentially sensitive data vulnerable."*

CubexSoft Data Wipe Software protects the media from any threat of data leakage by overwriting all addressable storage sites and hidden areas on the media with a binary pattern. This prevents the media from being physically damaged during the deletion of data. Through verified reports and certificates, CubexSoft offers immutable audit trails for failsafe regulatory compliance. Up to 27 international industry standards, including NIST and DoD, have been thoroughly tested into the program to assure compliance, ensuring the total destruction of data.
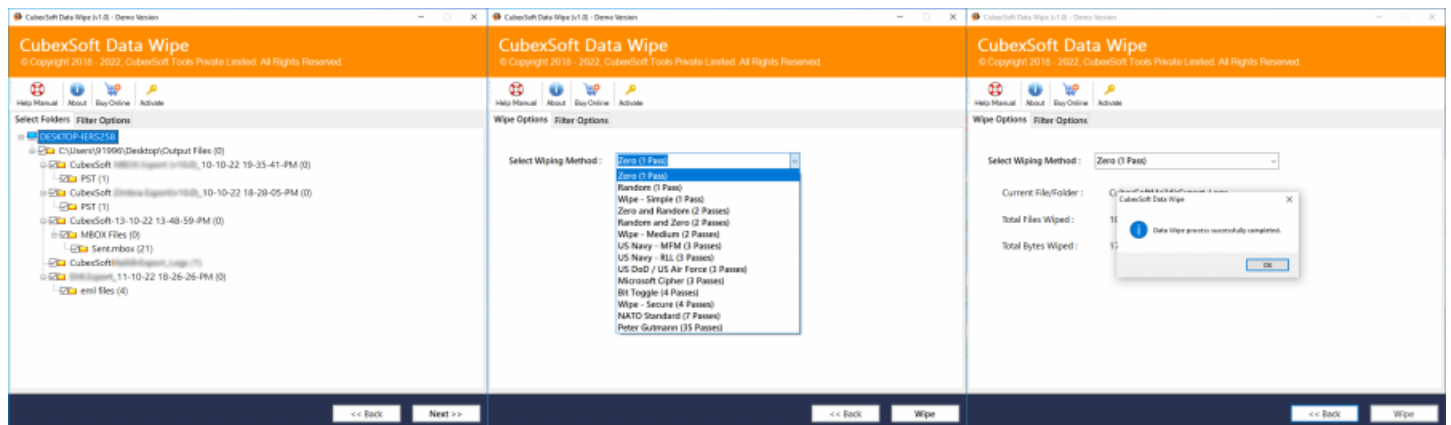

Securely deletes private and sensitive information from single and numerous devices.

Securely delete partitions, files, and directories from servers, Windows computers, Pen Drives, USB Drives, Laptops, etc.

To preserve a high level of privacy and security permanently deletes app system files, and other data from laptops, desktops, and servers.

Option to periodically automate and schedule erasures.

Secure Data Eraser can be downloaded for free for personal use as well as testing reasons from https://www.cubexsoft.com/data-wipe/ and supports all popular Windows operating systems in both the 32- and 64-bit versions.
