

## Caffeinated Toothpaste Gives Users A Buzz

**Winnipeg, Manitoba Feb 16, 2023 ([IssueWire.com](https://www.issuewire.com))** - Clearly Calcium Corporation has launched their newest product, Buzz Toothpaste™, a patent pending naturally stimulating toothpaste with caffeine. The product is designed to give users a morning pick-me-up through brushing their teeth, providing a safe and effective alternative to mass market toothpastes that contain fluoride derived chemicals.

Buzz Toothpaste is the brainchild of Clearly Calcium Corporation's Chairman and CEO, Richard H. Davis, who was inspired to create a caffeinated toothpaste after being turned down by several well-known toothpaste manufacturers. The product is clinically proven and offers a natural line of calcium restoring oral care products that promote healthy gums and teeth.

According to Davis, users of caffeinated toothpaste feel a boost 15 minutes after brushing and can experience the effects of caffeine throughout the day. He predicts that caffeinated toothpaste will soon become a popular morning ritual for many.

The Buzz Toothpaste brand is made in the USA and is available for retailers to stock by spring of 2023. The product line, which also includes Anti-Ageing Toothpaste Gel™ and Valcium GUM™ products, can be found in drug, grocery, and natural product stores nationwide and through online retailers.

Clearly Calcium Corporation is committed to providing safe and effective oral care products that promote healthy gums and teeth. Their line of calcium restoring products is a natural alternative to products containing fluoride derived chemicals.
