Share Price Probability: The Senior Director of Economics at The Profit Calculator stated that “the US LEI dropped significantly in December, continuing to suggest a near-term economic recession for the US”. Leading indicators showed a widespread decline in December, portending worsening circumstances for the manufacturing, housing, and financial industries in the coming months.

However, the Coincident Economic Index (CEI) has not dropped the same way as the Leading Economic Index (LEI), as employment and personal income continues to show strength. Although, industrial production, a part of the CEI, decreased for the third consecutive month. Before ramping up again in the last quarter of 2023, the overall share price economic activity is projected to turn negative in the upcoming quarters.

Should You Invest?

All Investments are risky by nature. Thus, you must always stay updated with the share market prices and carefully analyse how your investment may fare depending on various conditions— profit, loss, ROI, etc.

Whether you are an amateur investor just getting started or an experienced, seasoned investor, acquiring an investment calculator can assist you in determining how to achieve your objectives. It can demonstrate the impact your original investment, frequency of contributions, and risk tolerance may have on the rate of growth of your savings. Moreover, considering the current stock market economic recessions, its always advised to seek help from the right place.

Connect With Us: Established in Australia, Profit Calculator is a member-driven stock and ROI calculation platform that delivers reliable insights into the future. Additionally, the business provides comprehensive financial planning and advice tools.

The disciplined, risk-aware investment strategy used by The CEO of The Profit Calculator emphasises diversification, consistency of style, and fundamental analysis.
