**Pune, Maharashtra Mar 5, 2023 ([IssueWire.com](https://www.issuewire.com))** - Vichitra Games, a renowned game development company, has recently launched its latest mobile game, Infinite Magic Square Puzzle. Developed by Rohit Kulkarni, the game is based on the theories of legendary mathematician Srinivasa Ramanujan, and offers a unique twist on classic magic square puzzles.

Infinite Magic Square Puzzle challenges players to arrange the given 16 numbers in a 4x4 grid so that the rows, columns, and diagonals all add up to the same sum. With four difficulty levels to choose from, ranging from easy to very hard, the game offers a challenge for players of all skill levels.

What sets Infinite Magic Square Puzzle apart is its endless gameplay - the game's algorithm generates infinite unique puzzles for players to solve. This means that players can enjoy the game for hours on end without ever running out of puzzles to solve.

The game's simple and intuitive gameplay makes it easy for anyone to pick up and play, but don't be fooled - the hardest puzzles will challenge even the most skilled puzzlers. And with a cross-platform leaderboard, players can compete with friends and players from around the world for the top spot.

The idea for Infinite Magic Square Puzzle came to Kulkarni during a long bus ride, where he came across Ramanujan's magic square. Intrigued by the concept, he analyzed the magic square and solved the mystery behind it. He then created his own magic square using his birth date and realized that he could create an algorithm to generate infinite puzzles. The result is a game that offers a unique and challenging gameplay experience.

"We are excited to bring Infinite Magic Square Puzzle to players around the world," said a spokesperson for Vichitra Games. "With its endless supply of unique puzzles and simple yet addictive gameplay, we believe that players will love the challenge that this game offers."
