

## Roger Benites is the Co-Founder and CEO of Bitinka

Latin American Entrepreneur

**San Andres y Providencia, Colombia Jun 22, 2023 ([IssueWire.com](https://www.IssueWire.com))** - Roger Benites is a Peruvian technology enthusiast who has built a name for himself in the blockchain business. He is the co-founder and CEO of Bitinka, one of the most prominent cryptocurrency exchanges in Latin America.

Benites has had a successful career in the software industry despite having a solid school foundation in finance and international business.

## Education

Benites studied finance at the Universidad Científica del Sur and then earned an Associate's degree from the University of Belgrano. He also holds an associate's degree in International Business from Universidad Argentina de la Empresa. These degrees provided a solid foundation for his future career in technology.

## Career

Benites began his career as an analyst at IBM before transitioning into asset management. He left IBM after four years to become the Managing Partner of BQ Trade Corporation, which owns RGM Camera/Accessories. In 2011, Benites launched RGM Camera/Accessories, demonstrating his business zeal.

Benites co-founded Bitinka and became its CEO in 2013. Bitinka has risen to become one of South America's most popular cryptocurrency exchanges. Benites has been a driving force in Bitinka's growth and has been named one of Latin America's most prominent people in the blockchain business.

## The Future of Blockchain

[Roger Benites](#) anticipates a future in which blockchain technology is widely used. He compares blockchain technology to the 1950s credit card revolution, claiming that history repeats itself. He believes that in the future, everything will be based on the blockchain, particularly when it comes to smart contract usage.

He thinks that something newer will enter the picture in 10-15 years to disrupt the globe even more than blockchain, the internet, and AI. Benites, on the other hand, believes that blockchain will become a global standard.

## Regulating ICOs

While Benites supports blockchain technology, he admits that the majority of initial coin offerings (ICOs) are scams. He believes that regulations could help to improve the public's perception of ICOs.

Benites believes that ICOs are the future of startup funding, but that the right rules would provide investors with assurance and stability.

He highlights the need for legal jurisdiction and legal workers in proving the existence of a company. Governments must collaborate to appropriately regulate ICOs without disrupting the ecosystem and how things are currently growing.
