

Works - The Rave of the Moment

Future of Web3

Saint George, Saint Vincent And The Grenadines Mar 18, 2023 ([IssueWire.com](https://www.issuewire.com)) - The Blockchain or the web3 ecosystem is saturated with so many projects. Projects that have little or no value to the people, businesses, society, and the world in general. There are many projects whose main goal is not to solve any issue but to enter the ecosystem, defraud people and vanish. Some projects are even in the ecosystem to milk the people, while some are created by the millennial for personal interest and, after that, collapse. This has been the trajectory of many projects in the web3 ecosystem. However, there is a turn of events as a project is set to take the world by storm and touch the world in all ramifications. From CARE to CHAT, PAD, and many more. The name of the project is called WORKS.

Works is a new service token that would empower the applications of the work. Work is a total package, and a global application built by a team of formidable personalities, men of morals, and individuals who have carved a niche for themselves in the WEB3 ecosystem. Works are founded by the CEOs Dimeji Tomori and Rajesh Chinnadurai. Dimeji, CEO/Co-Founder has delivered operational excellence, programs, continuous improvement, and effective transformation that resulted in innovation, customer value, a better quality of life, and employee engagement for companies like GE, HP, & Johnson Controls. While Rajesh Chinnadurai, Co-Founder / Executive Director-IT based in India was a Managing Director of Various Companies and has rooted his innovative excellence in Technology, and the web3 space is at his fingertips. The last is Pralay Mandal, a sound Blockchain Expert, he is highly skilled in Blockchain Technology & Blockchain-based solutions for business purposes.

Furthermore, the project is premised on the quest to satisfy the significant needs in the Cryptocurrency and Blockchain community which is about a need for more applications to enhance the next future of not

just web3 but technology as a whole hence the birth of WORKS.

WORKS is an all-encompassing platform, undoubtedly the rave of the moment. It is the first DeFi project geared towards developing and creating a marketplace for services that cater to the need of the world. WORKS is a people-inclined project, as everyone on the platform has a use case for the project.

Works is a unique platform as it focuses on bringing various markets under one roof, thereby improving efficacy, effectiveness, and access to various services through the Work token.

Work is a different project in the web 3 space. It is a revolutionary protocol that aims to leverage the power of decentralized systems to empower the average user, which makes it unique and different from the bandwagon project we have in the global space.

The project is poised to solve many problems and create positive alternatives. From digital freelance services to healthcare services, to a fast and secure messaging app customized for various projects, to a launchpad for promising projects, NFT marketplace, a smart chain for developers to develop various dApps, and a charity platform to give back to the community. This no doubt already shows that WORKS is for everyone.

Meanwhile, all of Works products will be developed within the Marketplace. The expectation is to have a one-stop shop marketplace that will meet the community's and its people's needs. We are creating a product that provides Works Digital Services - talents can access the Works Marketplace and secure their futures by landing well-paying projects that last from a few months to years.

THE TOKEN (WORKS)

It is a unique token as it facilitates fast transactions on the protocol and helps users access cheaper fees while interacting with the platform. It also serves as a utility and governance token giving holders a say on how things are run on the platform. A look at many projects will reveal that most users or investors have yet to have a say on their tokens. But in WORKS, aside from the fast transaction pace, the fees are less and affordable for the average man. Meanwhile, the total supply is 150,000,000 WORK, but only 50,000,000 tokens will initially be distributed. Distribution Users can access the work token during public sales events and Airdrops.

WORKS will be doing its Special Sale at GEMPAD as IDO. WORKS will do IEO on Coinstore and other two tier-2 exchanges as well

WORK project is premised on four major components, which are Work Chat, Care Works, Work Pad, and Work Foundation. These are the four major components that the work project targets.

WORK CHAT

Work Chat is a unique application which is for messages. It is a fast and secure application built on Blockchain technology. Work chat is a platform where individuals can make voice notes, send emojis, and others. It is suitable for users to include freelancers, small and mid-sized businesses, and even large enterprises.

What makes the work chat unique is that apart from being built on a Blockchain ledger, User privacy, and security are of the utmost priority. The app employs two layers of end-to-end encryption for all data. Meaning your chat is secured, protected, and confidential.

CARE WORKS

The healthcare system in the world has been passing through a lot of challenges. One issue that the global space has been facing is getting patients' health records and accredited medical professionals to diagnose an ailment and not quacks. This is what the care WORK app will be solving. Tracking patients' health and medications, patient data is also stored on a distributed ledger that is immutable this then means information can be accessed with ease and used for future treatments if necessary. Unlike what is currently obtainable, tracking medical records could take months, but this is made straightforward with Care Work.

WORK PAD

It's a community-governed decentralized multi-chain powered Launchpad that helps new projects to raise funds. The Work Pad is for other projects as the platform caters to pre-sales such as ICOs and IEOs, helping projects and identifying suitable investors.

On the Work Pad, projects go undergo a vetting process where they must pass the necessary test proving their worth, use cases, market suitability, and more. The Work pad is also designed to help projects with marketing products, technical advice, etc.

WORK FOUNDATION

The foundation is geared towards helping the less privileged or charity, and it is Whatever small fraction of fees are taken. Users can rest assured it's put to good use to benefit the entire humankind since Works doesn't only put millions to work but gives back to the community through charity.

These four are the components of WORKS.

All four components will be using the Work Token. The work token would serve as a medium or fuel for the protocol.

WORK TOKEN AIRDROP

To avail investors and customers a glimpse of what to expect from this project is starting her airdrop. This airdrop is promotional activity to help bootstrap the use cases of Works. And Airdrop will be starting this week. The Airdrop is to expand the horizon of Works further and to show further the use cases and utility of the token in several areas and ways, which kick start this week as a lot of WORK tokens will be distributed.

INITIAL EXCHANGE OFFERING IEO WITH COINSTORE.

To provide a more secure alternative for potential investors and users to buy tokens during the fundraising phase with funds directly from their exchange wallets. WORKS has already spoken to the management of Coinstore, and Work Token is set to be listed, which will be in a few days. This is an act by the management of WORKS to make transactions seamless and easy for investors, potential investors, and users.

COIN MARKET CAPITALIZATION APPLICATION (CMC APPLICATION)

Every good project is listed on coin market capitalization, and to show the seriousness and the

doggedness of her project, an application has been sent to CMC to list work; this no doubt takes years for tokens, but as we speak, CMC is currently going through the application and the feedback at the moment has been tremendous.

CONCLUSION

In conclusion, WORKS is not just a token that has come to stay but a project that looks into the future for a better society and world. Furthermore, WORKS is for everyone who wants the best and a break from the norm of the other bandwagon projects that are geared toward profit-making only
