

Stream2Sea – High-Performance and Mineral-Based Sunscreen Proven Safe for Humans and Water Bodies

Alachua, Florida May 29, 2023 ([IssueWire.com](https://www.IssueWire.com)) - Stream2Sea is the first and only brand that provides the best reef-safe sunscreen that is scientifically tested and proven safe for freshwater fish, saltwater fish, and coral larvae. This Florida-based company uses formulas enriched with a proprietary and potent antioxidant-rich blend of wakame, aloe vera, tulsi, seaweed, green tea, and olive leaf that protects and nourishes your skin from within. Since 2015, Stream2Sea has been offering broad-spectrum, high-grade, and mineral-based sunscreen for the face and body. Each product has passed stringent HEL Labs Protect Land + Sea Certification and brings products that don't harm the environment. For more information, please visit: <https://stream2sea.com/>

A reef-safe sunscreen is free of chemical ingredients and small particles are known to damage and potentially kill coral reefs in the ocean. Those hazardous substances are oxybenzone, octinoxate, and octocrylene. Like many other things, the sunscreen debate needs careful weighing of two sides. You should choose a [mineral sunscreen](#) that is safe for you and the health of aquatic ecosystems. Look out for sunscreens that use non-nanoparticles because they are better for the environment and cannot pose a danger to marine life. If you're looking for optimal protection, consciously formulated sunscreen safe for you and the planet, Stream2Sea's reef-safe sunscreen could be your best bet.

Stream2Sea is a performance-based product line for active adventures that will take care of your skin and our blue planet. The company was founded in 2015 in Wauchula, Florida, which realized that products we put on our bodies could be highly toxic to our fragile aquatic ecosystem. Today, Stream2Sea is the only mineral-based sunscreen brand that's tested and proven safe for coral larvae, meaning it contains no ingredients that are known or suspected to harm the planet. A range of [biodegradable sunscreens](#) has 100% mineral actives, with no oxybenzone, avobenzone, octinoxate, or octocrylene. It is safe for the body and our water bodies with no silicones, preservatives, parabens, phthalates, and other scary ingredients included.

Each has an organic antioxidant blend that protects, deeply nourishes, and restores even the most sensitive skin. The manufacturing facility delivers everything from mineral-based sunscreen to gentle body care kits, shark-free squalene, and chemical-free sanitizers. All products are biodegradable and available in either recyclable sugar cane resin packaging or PCR plastic. Stream2Sea caters to diverse adventurers from all walks of life, including surfers, fishers, mountain bikers, tree house builders, day hikers, and lounge-chair seekers. Products don't include endocrine disruptors and chemical substances that could impact water ecosystems and cause harm to adventurous customers and their families.

About Stream2Sea:

Stream2Sea is a safe, sustainable, and science-based company that offers reef-safe sunscreen, chemical-free hand sanitizers, hand creams, and more. All products are tested and proven safe for freshwater fish, saltwater fish, and coral larvae. This Florida-based company has the best selection of mineral-based sunscreen with no harmful ingredients like oxybenzone, avobenzone, octinoxate, or octocrylene. They cater to consumers seeking serious protection and environmentally conscious formulations to protect water bodies and the planet.
