

When Destiny Brought A Smile To This Iraqi Boy's Face - Dr Rohit Yadav

Dr. Rohit Yadav's expertise covers all aspects of the implant process, from initial evaluation and implant placement to the final restoration, ensuring a seamless and successful outcome.

DR. ROHIT YADAV

Strategic Implantologist & Prosthodontist

Noida, Uttar Pradesh Jun 7, 2023 ([Issuewire.com](https://www.issuewire.com)) - Dr. Rohit Yadav is a highly skilled and experienced implantologist based in Noida. He is renowned for his expertise in dental implants and offers a wide range of services in this field. With a commitment to providing the highest quality of care, Dr. Rohit ensures that his patients receive optimal treatment and achieve long-term results.

It is one of the rarest cases in the world when a 20-year-old boy begins chewing food for the first time in his life. Don't believe it?

Meet Iraqi youngster Karam Waad, who got a new set of teeth implanted thanks to the ingenuity and tireless efforts of famous Dental Implant Surgeon Dr Rohit Yadav in India. Before the successful implantation of teeth was done on this Iraqi boy, he never enjoyed solid food and survived only on liquids till he landed in India and met Dr Rohit Yadav, who spearheaded the implantation process, using corticobasal implants to restore Karam's dental health and garnered global acclaim after successfully implanting a new set of teeth in Karam Waad.

Karam's dental issues began at a young age when he suffered a severe fall that severely impacted his gums, leaving him without teeth. Due to the heavy impact of the fall, he never got his natural teeth again. Without his dentures, Karam's dietary habits were limited to liquids, depriving him of a variety of solid foods and impacting his psychological well-being. Without his dentures, he never had a good smile. This had an impact on his psyche too, and he lacked confidence. His toothless smiles drew jokes and fun from friends.

Not having a good smile was a smaller problem compared to how it affected his dietary habits. Since he couldn't chew solid food, he depended entirely on liquids. He remained deprived of tasting many nice dishes, dry fruits, and other eatables as he just had to swallow whatever food he took in his mouth. He didn't know how to bite off anything chewable.

In January 2020, Karam, accompanied by his father, came to Delhi looking for a dental implant surgeon and a clinic that could provide the implantation process. He went from pillar to post, hopping from one hospital to another. Initially, numerous implantologists refused the process due to the complex nature of the case and the severe bone atrophy due to the absence of teeth since childhood in Karam's mouth. Many implant surgeons suggested complicated bone grafting surgeries but couldn't assure successful treatment even after that. Finally, they found their way to Dr Rohit Yadav.

Dr Rohit assured him of good results using corticobasal implants without involving unnecessary and extensive surgeries. His team completed Karam's full treatment in just eight days, an incredible feat considering that other implant surgeons had estimated that the treatment could take up to 1.5 years. When he saw his face in the mirror, he couldn't believe it. Gone were the toothless gums which gave him embarrassment and often made him feel ashamed of himself. Now he had a set of good, strong teeth.

Since he was not used to chewing food, he attended a fortnight-long therapy to learn how to chew and he was successful in gradually learning it. The joy on his face on the day he chewed the first morsel of food in his life was to be seen to be believed. He was on cloud nine, watching himself in the mirror time and again. He was admiring himself, appreciating the improved technology in dental implants and was grateful to Dr Rohit. He was grateful to our beloved motherland India too because it is here that he received a treatment that changed his destiny, his life forever.

Under the care of trained doctors, nurses and therapists, the Iraqi boy managed to put a smile on his face. He could walk with confidence, and enjoy the food, one of the beautiful blessings of God. Dr Rohit Yadav brought back the joy in his life, something he remained deprived of for over two decades. It was like a miracle.

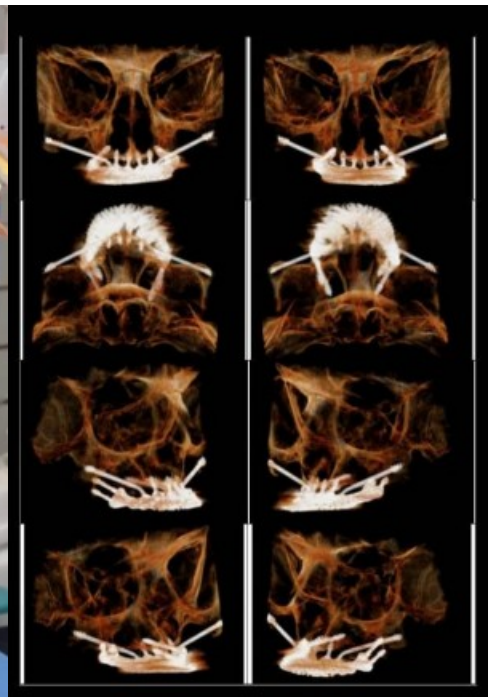

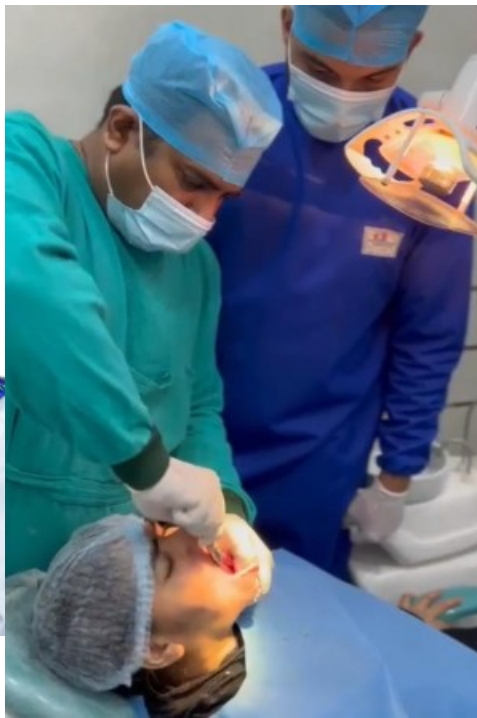

But science and surgery don't believe in miracles. They believe in experiments and genuine results. Dr Rohit Yadav and his team remain committed to keeping themselves updated with the latest advancements in dentistry to ensure that they can provide the most advanced and effective treatments to their patients. Dr Rohit and his team used the most updated technology and science & managed to accomplish this case beautifully with successful long-term results.

Karam and his father are grateful for the exceptional care they received in India, which allowed Karam to achieve a long-standing dream of chewing solid food and smile wholeheartedly. The experience has been life-changing for Karam, who can now walk with confidence and take pleasure in the simple joys of life. Karam and his father had come to India with hopes in their eyes. Their dream was fulfilled, as Karam could get something he had craved all his life. They say, "Where there is a will, there is a way."

Dr Rohit's success with Karam's case has shown that predictable results can be achieved even in the most complex and challenging cases, given the right vision and proper execution of a treatment plan. Dr Rohit Yadav and his team and the patient had a will and they found a successful way. It is possible to achieve predictable results even in extremely challenging and seemingly impossible cases if the doctor and his team have the right vision and execute a proper treatment plan.

Many people remain stagnant and refuse treatment because of their doubts and fears. Karam and his family made the first positive move when they came to India looking for a cure to a problem that had

kept nagging the boy since he was two. He found an angel in a trained doctor, [Dr Rohit Yadav](#) who took great care of him
