

## AENO Premium Eco Smart Heater is presented at the online exhibition of the Red Dot Awards 2023 Winners

The Red Dot Award published the lists of winners in the Product Design 2023 - AENO Premium Eco Smart Heater won in two nominations: "Heating and Air Conditioning Technology" and "Smart Product" for outstanding design and innovation.

Essen, Nordrhein-Westfalen Jun 21, 2023 ([IssueWire.com](http://www.IssueWire.com)) - The Red Dot Award published the lists of winners in the Product Design 2023 - **AENO Premium Eco Smart Heater** in two nominations: **Heating and Air Conditioning Technology** and **Smart Product** for outstanding

design, high quality, and innovation in the field of home heating. Energy-efficient performance and advanced connectivity features, the AENO Premium Eco Smart Heater is set to improve the home and office decor, lifestyle, and living being.

The jury recognized the cutting-edge heater that combines energy-efficient heating with advanced connectivity options. Equipped with Wi-Fi, the device can be easily controlled via a mobile app, allowing users to set schedules, adjust the temperature, and monitor energy consumption in real-time. In the [Heating and Air Conditioning Technology](#) section on the Red Dot website, there is an exhaustive description of the functionality and the opinion of the jury: “The main feature of the AENO Premium Eco Smart Heater is its hardened glass housing that is only 11 mm thick. There are no screws or metal parts on the front, so the unit exudes a smooth, clean look. There is only a power button on the housing – further control is done via an app. The heater can be placed on the floor with a stand or mounted on the wall. Infrared technology uses direct rays for the fastest and efficient and most economical heating. The heater is available in black and white and thus fits in with any type of interior style. The jury highlighted the purist design of the device: “It radiates calm and practicality and thus enriches any interior.”

The jury praised the smart features and design approach, which resulted in a clean, inconspicuous design with smart control via mobile application and just a single switch-on button on the control unit. The section [Smart product](#) includes an amazing review for AENO Premium Eco Smart Heater by the jury’s members: “AENO Premium Eco Smart is a heater that combines smart functionality with energy-saving technology and a minimalist appearance. The unit is composed of two extremely thin panels of tempered glass with an infrared heating element between them. The smart heater combines adapted heating panel temperature, adjustable room temperature, fall protection sensor, and timers in an invisible design. The puristic glass front in black or white is only interrupted by a backlit switch-on button, as the entire system, as well as the control of the energy consumption, is carried out via an app. “Smart functionality, user-friendly operation, and a very reduced design are combined here in a convincing way,” the jury emphasised”.

The Red Dot Design Award is the most prestigious design competition in the world, with a panel of international experts evaluating thousands of entries based on criteria such as innovation, functionality, and aesthetics. Winning the award is a testament to AENO's commitment to excellence and innovation in the field of home heating.

The winners were announced back [in April](#), but traditionally, the section with the list of products and online presentations is updated on the day of the Red Dot Gala, which takes place this year on June 19 in Essen at the Red Dot Museum (Germany).

All award-winning entries are displayed to a global audience in the online exhibition on the Red Dot website. In addition to details about the products, the creators, and the manufacturers, prospective clients, potential clients, journalists, and buyers can check out the jury's verdicts and product images.
