

Rodan Energy Solutions Takes Top Honors Again in the Environment + Energy Leaders Awards Program

Rodan's UPS+ BESS for Industrial/Manufacturing with Top Product of the Year

Mississauga, Ontario Apr 26, 2024 ([IssueWire.com](https://www.issuewire.com)) - Rodan Energy Solutions, a leading North American provider of energy solutions, today announced that its Rodan Energy Solutions UPS + BESS for Industrial/Manufacturing Facilities received Top Product of the Year 2024 in Business and Infrastructure from the annual Environment + Energy Leader Awards program. The project stands out for setting a benchmark for innovation and sustainability in its category.

Rodan's UPS + BESS system leads to improved energy efficiency, reduced energy costs, lower peak demand charges, enhanced grid stability, and a decreased environmental footprint. Properly managed and integrated, this system contributes to a more sustainable and environmentally friendly manufacturing operation not only by merely protecting isolated, high-priority assets but by also ensuring the stability and security of an entire facility's power supply. These systems assume critical significance in precision manufacturing environments, where even the slightest voltage imbalances can trigger equipment damage, disrupt production, impact energy consumption, and ultimately affect the bottom line. Rodan's mission is 'Making Sustainable, Attainable' by creating and delivering intelligent energy solutions to large consumers, distributors and power distributors and energy generators.

One judge said of Rodan's submission and case study: "These systems developed by Rodan offer companies a proven way to address a more secure and reliable electric power supply during periods of peak demand. Such systems will provide substantial benefits such as lower energy and operational costs, reduced GHG emissions, improved reliability, increased capacity, lower energy consumption, and reduced grid dependency."

Another added, "A well-designed UPS system should be scalable. The vendor has provided a solution that offers the standard requirements for scalability to the client, allowing for growth and the application of advances in both the reliability solution and the client's manufacturing processes."

“The distinction of Top Product of the Year in Business and Infrastructure by Environment+Energy signifies a remarkable achievement in the field.” Jessica Hunt, Co-President of E+E Leader, expresses her admiration for this year’s winners: “The introduction of six distinct categories in this year’s awards program not only celebrates the breadth of innovation within the industry but also highlights the specific areas where companies are truly making an impact. A win is a testament to these companies’ outstanding efforts and leadership in driving forward the sustainability agenda.”

About Rodan Energy Solutions

Rodan Energy is a leading North American provider of DER asset optimization, demand response and energy intelligence solutions. Our mantra is making sustainability attainable for commercial and industrial energy users as well as power distribution and generation companies.

US business located in Princeton, New Jersey with Canadian operations managed from Mississauga, Ontario and Calgary, Alberta. Rodan is active across North America and offers services to customers in all deregulated markets including IESO, AESO, PJM, NYISO, MISO, NEISO, CAISO and ERCOT.

About the Environment + Energy Leader Awards: For well over a decade now, the Environment+Energy Leader Awards program has celebrated the exceptional advancements made in the realms of environmental, sustainability, and energy management. The awards recognize those who contribute and set new standards in the industry, setting a high standard for others to follow. Winners of the awards are seen as Leaders in environmental initiatives and energy management, with their achievements serving as benchmarks for excellence across the globe.
