

Small and Medium Enterprises Adopt MDR Instead of Traditional SOC

Sao Paulo , Sao Paulo Jul 16, 2024 (Issuewire.com) - Tisec, a leader in cybersecurity solutions, announced today that it has seen a significant increase in the adoption of Managed Detection and Response (MDR) by small and medium enterprises (SMEs), instead of the traditional Security Operations Center (SOC).

MDR is an outsourced cybersecurity solution that offers proactive monitoring, detection, and real-time threat response. In contrast, an internal SOC allows the company to have full control over its network security with an internal team of experts.

“We are seeing a clear shift in SMEs’ preference for MDR,” said the CEO of Tisec. “Companies are realizing that MDR not only offers superior protection against cyber threats, but it is also more cost-effective than maintaining an internal SOC.”

Tisec has been helping companies make this transition to MDR with its ThreatDown MDR service. This service provides advanced threat-hunting capabilities, monitoring, and incident response. It is based on award-winning Endpoint Detection and Response (EDR) technology and is provided by a team of cybersecurity experts who remotely monitor the client’s network 24 hours a day, 7 days a week.
