

FUNPRO Men's Nylon Heated Vest (With Battery): Your Ultimate Cold-Weather Companion

Stay Warm and Connected: The Ultimate Heated Vest with Customizable Heat Zones and Smartphone Charging

Alabaster, Alabama Sep 10, 2024 ([IssueWire.com](https://www.IssueWire.com)) - [FUNPRO](#) has introduced its latest innovation in cold-weather apparel—the **FUNPRO Men's Nylon Heated Vest (With Battery)**. Designed to offer superior warmth and comfort, this vest combines advanced heating technology, intelligent features, and a sleek design, making it the ultimate cold-weather companion.

The vest's exterior is made of **100% nylon**, ensuring durability and a sleek appearance. It comes with a convenient **zipper closure** and is designed for **hand washing**, making it easy to maintain after outdoor adventures.

Advanced Heating Technology

At the core of this heated vest is FUNPRO's **8-zone heating system**, powered by **premium carbon nanofiber elements**. Unlike traditional 5-zone heated vests, this innovative design provides **lasting and consistent warmth** across critical areas like the back, abdomen, waist, shoulders, and neck. This ensures that users remain cozy even in the harshest winter conditions, making it an essential piece of gear for those who enjoy outdoor activities in cold climates.

Independent Temperature Control

The vest features a **5-in-1 smart controller** with a **three-zone heating system** that allows for customizable heat distribution. Users can independently control the heating levels and zones to suit their personal comfort, thanks to three distinct heating levels that cater to various environments and temperatures. A single touch of the central button controls the heating, while a long press switches the vest on or off, making it easy to adjust warmth with minimal effort.

Lights-out Design for Low-Profile Comfort

One of the standout features is the **intelligent controller** with a **lights-out design**. This allows wearers to turn off the vest's indicator light while maintaining heat, ensuring they stay comfortable without drawing attention. This feature adds an element of versatility, allowing the vest to transition seamlessly between casual wear and more low-profile environments.

Fast and Enduring Heat

Equipped with a powerful **10000mAh 5V/3A battery pack**, this heated vest can provide hours of continuous warmth. The battery, certified by UL/CE for safety, ensures reliability even in extreme conditions. The vest is not only an efficient source of warmth but also includes a **USB port for charging smartphones**, adding convenience for those on the go.

Comfortable Fit and Easy Maintenance

FUNPRO has designed this vest with ergonomics in mind, offering a **snug, lightweight fit** that contours comfortably to the wearer's body. In terms of maintenance, the vest is both hand-washable and

machine-washable, making it simple to clean and maintain without compromising its functionality. The removable battery ensures ease of care.

Perfect Gift for the Season

Whether for Thanksgiving, Christmas, or other special occasions, the FUNPRO Men's Nylon Heated Vest is the perfect gift. Combining comfort, technology, and style, it's a thoughtful and practical choice for anyone looking to stay warm this winter.

This heated vest is set to become a go-to item for outdoor enthusiasts, commuters, and anyone seeking reliable warmth during cold weather. With its innovative features and user-friendly design, FUNPRO is once again setting new standards in heated apparel.
