

Experience Advanced Airflow Technology for Dental Cleanings with Dr. Abdul Wehbe at Strathcona Dental Clinic in Edmonton

Strathcona Dental Clinic combines decades of trusted care with cutting-edge technology, offering patients faster, more comfortable cleanings with Airflow: Guided Biofilm Therapy.

Edmonton, Alberta Oct 19, 2024 ([Issuewire.com](https://www.issuewire.com)) - Established in 1959, Strathcona Dental Clinic has long been a pillar of dental care in Edmonton. For over six decades, the clinic has provided quality service using both traditional and innovative methods to ensure the highest level of care for its patients. Today, Strathcona Dental Clinic is proud to continue this legacy by incorporating [Airflow: Guided Biofilm Therapy](#), a revolutionary dental cleaning technology designed to enhance patient comfort and efficiency.

As dental technology evolves, so too has Strathcona Dental Clinic. Originally employing the standard rotating hand instruments and polishing pastes, the clinic now offers an advanced approach that significantly improves the cleaning experience. **Airflow: Guided Biofilm Therapy** not only ensures faster, more thorough cleanings but also reduces discomfort, making it ideal for patients seeking a more pleasant dental visit.

How Does Airflow: Guided Biofilm Therapy Work?

This cutting-edge technology utilizes a combination of fine powder and warm water in a gentle spray to remove biofilm (the sticky layer of bacteria that builds up on teeth). Unlike traditional methods that rely heavily on scraping, Airflow guides Dr. Abdul Wehbe and the Strathcona Dental Clinic team to target problematic areas more precisely. As a bonus, patients can even see which areas of their teeth were previously missed during at-home care!

For patients with dental implants, Airflow is a game-changer. Specialized tips are designed to clean around implants safely, ensuring both the implants and surrounding tissue remain healthy and free of infection, thanks to the expertise of [Dr. Devon Laatsch](#) and [Dr. Abdul Wehbe](#).

A History of Care, Innovation, and Patient Comfort

Since 1959, [Strathcona Dental Clinic](#) has prided itself on staying at the forefront of dental care. In the past, traditional cleaning methods—while effective—required the use of manual scraping tools and abrasive polishing pastes. These techniques, though tried and true, often caused discomfort for patients.

With the introduction of **Airflow: Guided Biofilm Therapy**, the clinic continues its commitment to comfort and excellence. Airflow minimizes the use of traditional handheld tools, significantly reducing discomfort. Patients can expect **minimal scraping, no gritty pastes**, and a smoother, more pleasant cleaning process.

Why Choose Airflow: Guided Biofilm Therapy?

Strathcona Dental Clinic is dedicated to improving both the health and experience of every patient who walks through its doors. The Airflow technology offers several important benefits:

- **More Effective Cleanings:** By targeting biofilm directly, Airflow helps reduce the risk of cavities, periodontal disease, and other dental issues.
- **Minimal Discomfort:** The gentle spray is easier on gums and teeth, eliminating the need for aggressive scraping or abrasive polishing.
- **Whiter Teeth:** Patients can enjoy a cosmetic benefit as well—Airflow technology often leaves teeth up to a shade whiter after each cleaning!

Advanced Technology with a Legacy of Care

Strathcona Dental Clinic's **commitment to dental technology** is rooted in a long-standing dedication to patient care. Over the years, they've implemented the best of both worlds—reliable traditional techniques and innovative, comfortable solutions like **Airflow: Guided Biofilm Therapy**. Whether a patient has been visiting for years or is new to the clinic, they can trust Strathcona Dental Clinic's blend of **experience** and **modern dental advancements** to provide exceptional care.
