

## Chris Conidis Unveils "Evolving Humanity: From Prehistoric Past to Modern Mastery" at Frost Museum of Science

Step Into Humanity's Evolutionary Journey: A Fusion of Science, Art, and Storytelling Awaits at Frost Museum

**Saint Cloud, Florida Jan 7, 2025 ([IssueWire.com](https://www.IssueWire.com))** - The Phillip and Patricia Frost Museum of Science is thrilled to announce its newest groundbreaking exhibit, *Evolving Humanity: From Prehistoric Past to Modern Mastery*. This immersive experience, created by renowned writer and producer Chris Conidis in collaboration with Elios Entertainment, will open to the public on November 1, 2025, and run through March 31, 2026.

## A Journey Through Time

*Evolving Humanity* takes visitors on a transformative journey through the story of Homo sapiens, beginning with our prehistoric ancestors and culminating in visions of the future. This exhibit blends cutting-edge technology, stunning animatronics, and interactive storytelling to explore the milestones that shaped humanity—offering a fresh perspective on our shared history.

“*Evolving Humanity* isn’t just about showcasing artifacts or historical moments,” said Chris Conidis, creator of the exhibit and founder of Elios Entertainment. “It’s about immersing people in the wonder of our evolution and the extraordinary journey that brought us to where we are today—and where we might go next.”

## The Story of Us: How Human Evolution Inspires My Projects

If there’s one unifying thread that ties all my projects together—be it *Progress City* or my more satirical explorations of civilization—it’s this: they’re rooted in the timeless narrative of human evolution. Yes, the grand *story of us*, complete with all the messy bits we’d rather gloss over, is both the foundation and framework for everything I create. To understand my work, you must first grasp the mythology of human evolution and its eerie resemblance to the archetypal hero’s journey. Spoiler alert: the hero doesn’t always get a happy ending.

## The Narrative of Human Evolution

Human evolution, for those not keeping track, is usually depicted as a neat, horizontal line—like one of those motivational posters that says, “Progress: Keep Going!” It’s a comforting little myth where we go from swinging in trees to ruling the world (or at least pretending to on social media). It’s a tale of small-brained primates stumbling toward big-brained civilization, with plenty of questionable decisions along the way.

This journey—half science, half fairy tale—always starts in a state of equilibrium. Picture our hero, a nonhuman primate, living his best life in the trees. Sure, it’s not glamorous, but it’s safe, and bananas are practically free. But of course, something has to ruin it. Maybe he’s weaker than his peers, or maybe he’s just bored. Either way, our hero gets the boot—thanks to a predator, climate change, or some compulsory life chore (think early morning meetings, but with more snarling).

This forced departure marks the beginning of the hero’s journey. And so, out of the jungle and into the big, scary savannah he goes, facing a series of trials: avoiding predators, discovering fire, and figuring out how not to starve. These tests are the crucibles of evolution, shaping him into something new. At least, that’s the story. It’s basically *The Lion King* but with slightly fewer singalongs and a lot more survival panic.

## Key Exhibit Highlights

- **Animatronic Hominids in Action:** Meet life-sized recreations of early humans in their natural

habitats.

- **Immersive Environments:** From ancient savannas to Neolithic villages and industrial cities, each section brings a different era to life.
- **Interactive Workshops:** Hands-on activities like virtual tool-making and prehistoric art sessions.
- **Live Theatrical Show:** *Through the Eyes of Time*, written by Chris Conidis, is a 20-minute performance combining animatronic characters and live actors to dramatize pivotal moments in human history.

## Innovation Meets Education

This exhibit bridges the gap between entertainment and education. Students, families, and curious minds of all ages will discover the evolution of humanity through a multi-sensory experience that integrates science, art, and technology.

“Visitors won’t just learn—they’ll feel what it was like to evolve,” said Conidis. “From mastering fire to contemplating the possibilities of genetic engineering, this exhibit celebrates the ingenuity that defines us.”

## Details and Tickets

- **Location:** Phillip and Patricia Frost Museum of Science, 1101 Biscayne Blvd, Miami, FL
- **Dates:** November 1, 2025 – March 31, 2026
- **Hours:** Open daily from 10:00 AM to 6:00 PM
- **Tickets:** Available now at [frostsscience.org](https://frostsscience.org)

## About Elios Entertainment

Elios Entertainment, founded by Chris Conidis, specializes in creating transformative storytelling experiences. With a history of writing for Disney and Universal Studios, Conidis brings a unique perspective to themed entertainment, combining traditional techniques with cutting-edge innovation.
