

# New Database of Funding Sources for Biodiversity Related Startups Launched

Who's Investing in Biodiversity-Tech Startups?

**London, United Kingdom Jan 10, 2025 (IssueWire.com)** - [BiodiversityStartups.com](https://www.biodiversitystartups.com) is today announcing the launch of the world's first database of investors focused specifically on biodiversity-tech startups. The database is being made freely available as download from the company's website.

Early-stage biodiversity tech is booming, but finding the right funding sources can be a jungle. Biodiversity-tech is still very much an emerging sector and not all "climate" funders have an investment interest in biodiversity. As a result, many biodiversity-tech entrepreneurs seeking funding have become demoralised trawling through hundreds of funding sources for Climate-tech, Green-tech, Nature-tech and Clean-tech startups that just aren't relevant to them. Instead of focusing on building their solutions and business, these entrepreneurs are wasting valuable time pursuing investment sources that will never engage with them.

BiodiversityStartups.com has built a database of funding and Accelerators that have a specific interest in biodiversity-tech areas like MRV, Bluetech, eDNA and biodiversity data. By accessing this freely available data, biodiversity-tech startups can now improve the efficiency of their funding research and accelerate their funding rounds. The database also includes potential sources of revenue for biodiversity-related startups from Advance Market Commitment programmes.

The database is available for free download here:
