

Study Results Show Revolutionary At-Home Fertility Aid Increases Pregnancy Rates In All Age Groups

Enfield, Connecticut Jan 8, 2025 ([Issuewire.com](https://www.issuewire.com)) - Ovarium Conception, a leading innovator in natural reproductive health solutions, has released the results of an observational study on the Ovarium Conception Kit. The observational study of participants using the Ovarium Conception Kit revealed an overall 52% pregnancy rate, compared to the 15% average pregnancy rate across all age groups with regular unprotected sex and no fertility issues.

A woman's chances of getting pregnant decline with age, particularly after the age of 35. In her 20s, a woman is at peak fertility, with about a 20-25% chance of conceiving each month. Within the Ovarium Conception study, that number increased to 43%. By the age of 30, fertility begins to gradually decline, and by age 35, the decline becomes more pronounced with a 10-15% chance of getting pregnant naturally. For the women between 30-34 in the Ovarium Study, the number increased to 64%, and for women between 35-39, the number increased to 44%. After 40, conception becomes the most difficult, and the chances of conception decline to only 5%, however; for the women in the Ovarium Study, that number increased to 50%.

"We are thrilled to share the remarkable findings from the Ovarium Conception Kit study, which demonstrated an impressive improvement in conception rates across all age groups," said Nichole Whitcomb, Chief Operating Officer of Ovarium Conception. "The study showed the chances of couples conceiving using the Ovarium Conception Kit is up to 246% higher than the average chance of conceiving without it. By enhancing the chances of successful conception with an innovative, non-invasive solution, we are empowering couples to take control of their fertility and achieve their dreams of becoming parents in all age groups."

The entire Ovarium Conception Kit includes two different sizes of patented silicone conception cups, FDA cleared sperm-friendly lubrication, pregnancy and ovulation test strips. Designed to maximize the likelihood of conception by placing sperm closer to the cervix during the fertile window, the patented conception cup can safely be worn for up to 12 hours without leakage, giving sperm maximum time to reach the egg.

The study results come at a pivotal moment when demand is growing for hormone-free, plant-based products that provide safe, natural solutions for fertility. Ovarium Conception's products are specifically designed to support optimal reproductive health without the use of artificial hormones or chemicals. All products are free from hormones, BPA, latex, GMOs, gluten, and are vegan, ensuring they meet the diverse health needs and dietary preferences of a broad range of individuals.

About Ovarium Conception: Ovarium Conception is a women-owned company founded by an APRN, specializing in natural, hormone-free fertility products. With a focus on empowering individuals and couples with effective, at-home fertility solutions, Ovarium Conception offers a range of fertility products, including the Ovarium Conception Kit.
