

Zachary Feinsilver Featured in Exclusive Interview on Sustainable Landscape Design

Subheading: A Thoughtful Discussion on Blending Nature, Functionality, and Community

Boca Raton, Florida Feb 26, 2025 ([IssueWire.com](https://www.issuewire.com)) - Landscape architect Zachary Feinsilver has been featured in an exclusive interview exploring his philosophy on sustainable design, environmental stewardship, and the role of landscape architecture in shaping our future. The conversation, titled "Zachary Feinsilver: Designing with Purpose, Building with Nature," offers insights into Feinsilver's approach to creating outdoor spaces that harmonize with both people and the environment.

Feinsilver, who is based in Boca Raton, Florida, has built a career around functional, aesthetically enriching, and eco-conscious design. His academic background includes a Bachelor of Landscape Architecture from Florida Atlantic University and a Master's in Urban Design and Sustainability from the University of Southern California. With expertise in urban development, water management, and native planting, he has worked on a diverse range of projects—from residential landscapes to large-scale public spaces.

"I don't see landscaping as decoration," Feinsilver shares in the interview. "It's about creating spaces that serve both people and the planet at the same time."

A Commitment to Sustainable and Functional Design

Throughout the interview, Feinsilver discusses his belief that landscape architecture should work with nature, not against it. He highlights how native plants, smart irrigation systems, and green infrastructure can reduce environmental impact while enhancing outdoor spaces. His experience as Principal Designer for Coastal Elements Landscaping and Project Manager for GreenScape Urban Solutions has allowed him to implement these principles in real-world projects.

One key area of focus is water conservation and stormwater management, particularly in South Florida's unique climate. Feinsilver's projects often incorporate rain gardens, bioswales, and permeable surfaces to control runoff and maximize efficiency.

"Water is one of our most valuable resources, but we treat it like an afterthought," he explains. "A well-designed landscape manages water efficiently instead of letting it go to waste."

Designing for People and Community

Feinsilver believes that outdoor spaces should be inviting and accessible. Whether designing urban parks or private gardens, his goal is to create areas that encourage human connection and environmental awareness.

One of his favorite projects involved revitalizing an underused city park by integrating multi-use areas, improved drainage, and native planting. The result was a community hub that transformed how people interacted with the space.

"A public space should feel welcoming," he says. "If people don't want to spend time there, then it's not doing its job."

Looking Ahead

Feinsilver sees landscape architecture as a crucial tool in addressing climate change, urbanization, and environmental degradation. He advocates for cities to incorporate green infrastructure and climate-resilient landscapes into urban planning, ensuring that public spaces remain functional and sustainable for future generations.

"I want to see more cities integrating nature into their planning," he states. "Green infrastructure isn't just a luxury—it's a necessity for the future."

Feinsilver's work continues to focus on projects that align with his core values: sustainability, resilience, and connection to nature.

About Zachary Feinsilver

Zachary Feinsilver is a licensed landscape architect based in Boca Raton, Florida. He specializes in sustainable and community-focused designs, with experience in urban ecology, climate-resilient landscaping, and water management. He is a LEED Accredited Professional and a member of the American Society of Landscape Architects (ASLA). His work includes residential, commercial, and public space development, with a strong emphasis on environmental responsibility and long-term usability.
