

Cognicert Limited Launches Innovative Carbon Management Programs to Fight Climate Change and Drive Sustainability

Combatting Global Warming: How Cognicert's Sustainability ISO Programs are Driving Climate Action

London, United Kingdom Mar 12, 2025 ([IssueWire.com](https://www.issuewire.com)) - Tackling the Global Warming Crisis with Cognicert's GHG Certification Programs

Cognicert Limited/ www.cognicert.com

Cognicert Limited is a provider of personnel and management systems certification services on a wide range of international standards. As a provider of training, audit, and certification services;

Global Warming Crisis Escalates: Insights from 2024

The global warming crisis reached unprecedented levels in 2024, with global temperatures rising by an average of 1.5°C above pre-industrial levels. Catastrophic natural disasters such as Cyclone Freddy in the Indian Ocean, severe droughts in East Africa, and the devastating wildfires in Canada highlighted the tangible impacts of a warming planet. The Intergovernmental Panel on Climate Change (IPCC) attributes over 76% of greenhouse gas (GHG) emissions to energy production, transportation, and industrial processes, underscoring the urgency for global action.

Statistics to Drive Home the Message

- GHG emissions reached a record high of 36.8 billion tonnes in 2024 (Global Carbon Project).
- Over 1 billion people were affected by climate-related disasters in 2024 (UNDRR).
- The energy sector accounts for approximately 73.2% of global CO2 emissions (IEA).

Cognicert stands ready to equip individuals and organizations with the tools needed to address this crisis effectively. Together, we can create a sustainable, low-carbon future.

Contributions to the Crisis: The GHG Burden

Greenhouse gas emissions, primarily from carbon dioxide (CO₂), methane (CH₄), and nitrous oxide (N₂O), are driving climate instability. Industrial activities, deforestation, and fossil fuel combustion contribute significantly, exacerbating the frequency and intensity of extreme weather events. As the global community seeks to curb emissions, robust monitoring, reporting, and verification mechanisms are crucial.

The Role of Government and Organisations in Combating Climate Change

Governments and organizations play a pivotal role in the global effort to reduce, remove, monitor, and report greenhouse gas (GHG) emissions. Governments are responsible for creating and enforcing policies that set emission reduction targets, funding renewable energy initiatives, and establishing regulatory frameworks to ensure accountability and transparency. Organizations, on the other hand, have the power to innovate and implement sustainable practices within their operations, adopt energy-efficient technologies, and align with international standards for GHG management. Through robust monitoring and reporting mechanisms, both sectors can track progress, identify improvement areas, and contribute to global climate goals. Collaboration between governments and organizations fosters a unified approach to combating climate change, driving impactful action that supports the transition to a low-carbon economy.

The Role of Cognicert in Combating Climate Change

Cognicert, a leader in professional training and certification, offers **ISO 14064, ISO 14067, ISO 59004, and ISO 14044 Lead Auditor and Implementer Courses**. These globally recognized certifications empower individuals, organizations, and governments to:

- Accurately measure and report GHG emissions.
- Implement strategies for GHG reduction and carbon removal.
- Align with international standards, ensuring credibility and transparency in climate action.

Managing Director John A. states:

"The fight against climate change requires skilled professionals who understand the nuances of GHG management. Our courses equip participants with the knowledge to drive impactful change within their organizations and communities."

John adds:

"Through collaboration with governments and corporations, Cognicert is building a network of climate-conscious leaders committed to sustainable practices. Together, we can achieve a significant reduction in global emissions."

The Power of Partnerships

Governments play a pivotal role in combating climate change by funding initiatives, enforcing regulations, and supporting capacity-building programs. Partnerships with Cognicert ensure access to training that aligns with national climate targets and global frameworks like the Paris Agreement. Collaborative efforts can expedite progress toward net-zero goals while fostering innovation in sustainable technologies.

Organisations can partner by sponsoring their employees to attend our courses on ISO 14064 and 14067. They can also engage our team of professionals in helping to implement the standards in their organisation. We also seek collaboration with GHG Reduction and Carbon Removing organisations as well as Verification/Validation and Reporting Bodies.

Join the Movement: How to Partner with Cognicert

Organizations and governments are encouraged to collaborate with Cognicert in addressing the climate crisis. Benefits of partnership include:

- Access to world-class training and resources.
- Contribution to global climate goals.
- Promotion of the climate change activities
