# Rankiteo Reinvents TPRM with a Next-Gen Cybersecurity Scanner – A Better Approach from SecurityScoreCard & BitSight

Introducing Rankiteo's Next-Gen Cybersecurity Scanner – Smarter, Faster, and More Accurate TPRM Insights

San Francisco, California Mar 5, 2025 (Issuewire.com**)** - Rankiteo, a leading **Third-Party Risk Management (TPRM)** platform, announces the launch of its **next-generation cybersecurity scanner**, redefining how companies assess and manage cyber risks associated with their vendors, partners, and suppliers. Unlike traditional cybersecurity rating firms such as **SecurityScoreCard** and **BitSight**, which rely on **third-party data aggregation**, **Rankiteo has built its own proprietary scanning technology**, ensuring **complete independence, enhanced accuracy, and cost efficiency**.

A New Approach: Full Independence from External Data Sources

Most cybersecurity rating platforms purchase external data and correlate it to assess security risks. **Rankiteo has taken a different approach**, investing over a year in research and development to create a **self-sufficient, real-time scanning engine**. This cutting-edge technology enables Rankiteo to:

- **Directly scan, analyze, and score vendor and supplier vulnerabilities** without external dependencies.
- **Deliver real-time, precise insights** based on actual security threats, rather than third-party interpretations.
- **Ensure transparency and accuracy** with first-hand data collection and assessment.

"TPRM should not rely solely on external datasets. Companies deserve **real-time, first-hand security**

insights on their third-party vendors, without being constrained by the limitations of third-party data providers," said Jeremy Canale, CEO of Rankiteo. "With our proprietary scanner, Rankiteo ensures a **more reliable, independent, and data-driven approach** to managing cybersecurity risks."

Optimized Infrastructure: Lower Costs, Greater Scalability

Beyond achieving **data independence**, Rankiteo has also revolutionized **infrastructure management**, allowing it to dynamically **scale scanning resources** based on demand. Unlike competitors who rely on static data sources and high fixed costs, Rankiteo's **adaptive infrastructure** ensures:

- **Lower operational costs**, making TPRM and cybersecurity assessments more accessible.
- **Optimized resource allocation**, eliminating inefficiencies and reducing unnecessary computational expenses.
- **Scalability**, allowing for increased scanning capacity when needed without performance trade-offs.

A New Era for Third-Party Risk Management

By fully **controlling its scanning, scoring, and infrastructure**, Rankiteo sets a **new standard for TPRM**, offering a platform that is:

- **More precise** – directly identifying and analyzing vendor risks.
- **More transparent** – eliminating reliance on third-party data providers.
- **More cost-efficient** – dynamically adjusting infrastructure to optimize resources.

Rankiteo is redefining how businesses manage third-party cybersecurity risks, providing the most advanced, independent, and scalable TPRM solution.

About Rankiteo

Rankiteo is an innovative **Third-Party Risk Management (TPRM) platform** that provides real-time insights into corporate cybersecurity postures. By leveraging proprietary scanning technology and a scalable infrastructure, Rankiteo offers **accurate, independent, and cost-effective** risk assessments for businesses worldwide, helping organizations mitigate vendor and supply chain cybersecurity threats.
