

Work Comp Saver Launches Game-Changing Software to Slash Workers' Compensation Costs for Small Businesses

Philadelphia, Pennsylvania Mar 7, 2025 ([IssueWire.com](https://www.IssueWire.com)) - Work Comp Saver, a new SaaS solution designed for high-risk industries like construction and moving companies, has officially launched. This innovative platform empowers small businesses to create a customized safety program in under 30 minutes—helping them lower workers' compensation costs without hiring expensive consultants or spending months on paperwork.

Workers' compensation insurance costs have skyrocketed, and many small business owners believe paying high premiums is just "the cost of doing business." However, having a documented safety program can instantly make companies eligible for premium discounts of 5-30%—potentially saving tens of thousands of dollars each and every year. Work Comp Saver automates this process, making risk reduction programs fast, easy, and affordable.

"We created Work Comp Saver after seeing how many small businesses were stuck paying inflated workers' comp rates simply because they didn't have a formal safety program," said Dave Risi, Co-Founder of Work Comp Saver. "Most small companies don't have the time, expertise, or budget to develop one from scratch. That's why we built a simple, automated tool that gets it done in minutes."

How It Works:

- **Answer a Few Questions** – Work Comp Saver's online assessment defines what safety programs are necessary and matches them to your business operations.
- **Instantly Generate a Custom Plan** – Get a complete, compliant safety program in less than 30 minutes.
- **Start Saving on Insurance** – An email with a summary report is automatically sent to the insurance agent with the justification and details to help them qualify for state-specific discounts and scheduled credits to reduce workers' compensation premiums.

Why Work Comp Saver?

🔍 Saves Time – No need to spend months developing a program.

🔍 Saves Money – No consultants, no hidden fees—just straightforward cost savings.

🔍 Easy to Use – Built for business owners who don't have a safety background.

"As a software company, we leverage cutting-edge algorithms and state-of-the-art automation to generate fully customized safety programs in minutes," said Satin Sanghi, Co-Founder of Work Comp Saver. "By using smart technology to analyze industry-specific risks and compliance requirements, we've eliminated the complexity of safety program development—allowing businesses to focus on what they do best while still qualifying for substantial insurance savings."

"We're rolling this out to help small businesses save money right away. If you're overpaying for workers' comp, this is the easiest way to start cutting costs today," added Dave.
